For more details about the format of the Filter property, please see the previous article on the OpenFileDialog, where it's explained in details.

It works and looks much like the OpenFileDialog which we used in the previous article, with a few subtle differences.

With a filter like the above, the resulting SaveFileDialog will look like this instead:With that in place, you can write filenames without specifying the extension - it will be taken from the selected file type in the filter combo box instead.. Setting the initial directoryThe initial directory used by the SaveFileDialog is decided by Windows, but by using the InitialDirectory property, you can override it.. For a full list, please see this MSDN article Besides the options already mentioned in this article, I want to draw your attention to the following properties, which will help you tailor the SaveFileDialog to your needs:AddExtension - defaults to true and determines if the SaveFileDialog should automatically append an extension to the filename, if the user omits it.. If you want your application to be able to save files without file extensions, you may have to disable this option.. Just like the OpenFileDialog, the SaveFileDialog is a wrapper around a common Windows dialog, meaning that your users will see roughly the same dialog whether they initiate it in your application or e.. If it returns true, we use the FileName property (which will contain the selected path as well as the user entered file name) as the path to write our contents to.. This also indicates to the user which file formats your application supports, which is of course important. 34bbb28f04 Another Word For Classes
